## Gira – The company

### Intelligent building technology from Gira

Intelligent building technology from Gira represents future-fit technology and flexible solutions, combined with a high quality of design: automatic light control, time-dependent temperature control, distribution of music in all rooms, convenient door communication, integration of security systems, and many other functions for more convenience, security and value.

In Radevormwald, Germany, approximately 1,200 employees produce switches and socket outlets as well as system components for intelligent building technology, including devices for the KNX system. As a founding member of the EIBA, Gira has contributed significantly in the development of building system technology in Germany. It is the prerequisite for equipping a building "intelligently". In addition, new technologies are always fused with electrical installation through the Gira design platforms to become part of the Gira switch ranges.

### 100 Years of Gira – Looking ahead

In the 100th year of its history, Gira, a family-run company in the fourth generation, presents itself as a premium brand on the electrical installation market and stands not only for innovation and design, but also for close cooperation with wholesalers and trade, and for marketing that has already been awarded numerous prizes.
