The info module enables information (e.g. house number) to be displayed and can be customised via the Gira inscription service (www.beschriftung.gira.de).
The blind module leaves space for future applications (e.g. retrofitting with camera module) and serves as a design element for realising large door stations in the system style.

Installing the module

The following steps can be found in the mounting instructions for the System 106 surface-mounted housing 1- to 5-gang or flush-mounted housing 1- to 5-gang:

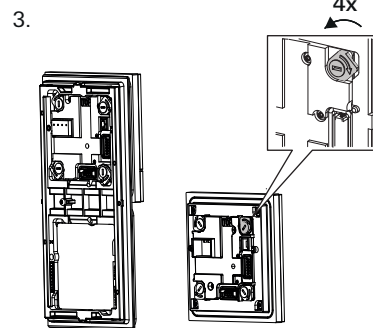

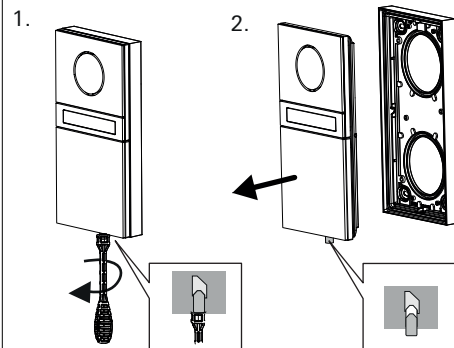

- Lock module on function carrier.
- Connect system cable.
- Connect terminating resistances.

Terminating resistance

Two terminating resistances are included from surface-mounted housing, 2-gang.
The terminating resistances are always attached to the first and last module on the system cable.

Replace module

Assembly in reverse order.
