DCS-IP data interface release notes

Firmware version: 1.1.41

Gira Project Assistant (GPA) version: 4.2 or higher
We recommend that you always use the latest available GPA version.

New functions
- Extension of the device data points:
    - Call status (after ringing, the status is signalled until the system returns to its basic state by ending the call)
    - Audio status (DIN 18040 requirement, active audio connection signalled from taking the call until the end of the call)
    - Door opener status (DIN 18040 requirement, door latch release displayed)

Bugs fixed
- When GPA was used to read the bus address of the add-on module for built-in speakers (order no. 1259 00), the numbers were displayed in the wrong order.
- The connection between the built-in speaker (order no. 1258 00) and the colour camera for door station TX_44 (order no. 1265 6x) was not supported or caused malfunctions when the project data was loaded into the DCS-IP data interface.
